

# MRI Devices 8 Channel NV Array

## Coil Configuration Quickstep Guide

8NVHEAD\_A

- ASSET Compatible
- Highest SNR for brain imaging
- Maximum FOV 24CM
- SCIC Recommended
- Not Compatible with spectroscopy

**Applications:**

- Brain / Cerebellum Imaging
- MRA COW

8NVHEAD ONE RCVR

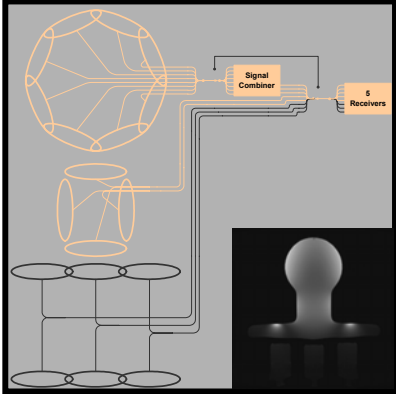

- NOT** ASSET Compatible
- Highest uniformity for brain imaging (decreased SNR compared to 8NVHEAD\_A)
- Maximum FOV 24CM
- SCIC Recommended

**Applications:**

- Brain / Cerebellum Imaging
- Spectroscopy

8NVHEAD NECK\_A

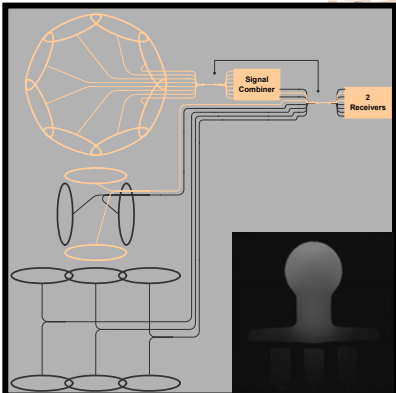

- ASSET Compatible
- Increased S/I coverage as compared to 8NVHEAD\_A
- Maximum FOV 28CM
- SCIC Recommended

**Applications:**

- Brain Imaging (when extended S/I coverage is needed)
- Soft-tissue neck Imaging

8NVHEAD NECK

- NOT** ASSET Compatible
- Increased S/I coverage as compared to 8NVHEAD\_A  
More uniformity, but decreased SNR as compared to 8NVHEADNECK\_A
- Maximum FOV 28CM
- SCIC Recommended

**Applications:**

- Brain Imaging (when extended S/I coverage is needed)
- Soft-tissue neck Imaging

# MRI Devices 8 Channel NV Array

## Coil Configuration Quickstep Guide

8NVARRAY\_A

- ASSET Compatible
- Maximum FOV 40CM
- SCIC Recommended
- Not recommended for angiographic exams

**Applications:**

- Cervical Spine
- Soft tissue Neck

8NVANGIO\_A

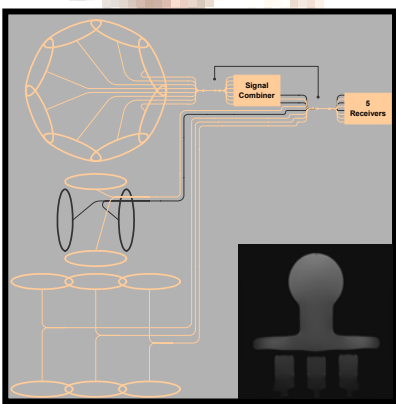

- ASSET Compatible
- Optional Configuration. For install, contact your GE Field Service Representative
- Maximum FOV 40CM
- SCIC Recommended
- Improved uniformity as compared to 8NVARRAY\_A

**Applications:**

- Carotid angiographic studies with ASSET

8NVANGIO LAT

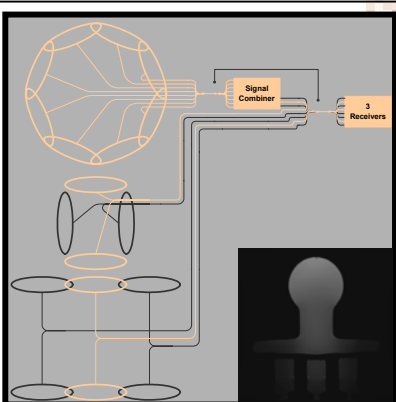

- NOT** ASSET Compatible
- Largest FOV coverage for Angio imaging
- Maximum FOV 40CM
- SCIC Recommended

**Applications:**

- Angio imaging of the Brain and Neck

8NVANGIO MED

- NOT** ASSET Compatible
- Reduced R>L coil coverage to reduce phase wrap from shoulder anatomy
- Maximum FOV 40CM
- SCIC Recommended

**Applications:**

- All Angio imaging of the head and neck
- Soft-tissue neck Imaging
